Executive Summary

As a part of the October 2019 fare compliance survey, the three metropolitan modes of transport of bus, tram and train were covered along with regional train services within the commuter belt.

Compliance on the metropolitan network is high, with compliance at 96.8 percent for October 2019. This result continues a trend of improvement from 96.0 percent in October 2018 and 96.5 percent for May 2019.

Increases in metropolitan network fare compliance have been influenced by an increase of fare compliance on bus services. October 2019 bus fare compliance of 96.0 percent is an increase from results collected in May 2019 of 95.1 percent and a significant increase year to year from the results of 92.0 percent from the October 2018 survey. The results recorded in October 2019 are the highest since the beginning of the fare compliance survey and aligns compliance rates on the metropolitan network across all three metropolitan modes.

Tram compliance rates of 97.3 percent in October 2019 shows continued high compliance rates, following previous high rates of 97.1 percent in May 2019. Compliance rates on tram services are now on par with rates observed on metropolitan train services.

Metropolitan train compliance rates of 97.1 percent in October 2019 remain high. This is a slight increase from rates observed in May 2019 of 96.9 percent, though year on year comparisons are slightly lower from compliance rates observed in October 2018 of 97.5 percent.

Compliance levels on regional train services continue to be lower than on metropolitan services. Regional train compliance rates in October 2019 of 95.3 percent are higher than results recorded in May 2019 of 93.9 percent, however they are on par with results from the same time period last year of 95.1 percent observed in October 2019.

The results from the October 2019 and May 2019 fare compliance surveys have been used to estimate the revenue impact of fare evasion over the 2019 financial year. The revenue impact is estimated at \$30.7 million for the 2019 calendar year, comprising \$25.2 million on the metropolitan network and \$5.4 million on regional trains. Revenue impact of \$14.2 million for the July to December 2019 period is lower than the impact from January to June 2019 of \$16.5 million, this has largely been driven by high compliance rates on regional trains.

Background

Overview of the fare compliance survey

Fare compliance surveys are conducted by Public Transport Victoria (formerly by Metlink) in May and October each year to measure the rate of fare compliance on the public transport network. It is also a requirement of the metropolitan train and tram Franchise Agreements that fare compliance surveys are conducted in each half year period.

Fare compliance surveys have been conducted on metropolitan trains, trams and buses since 2005 and on regional train services since October 2012.

Methodology and analysis requirements for the fare compliance survey are detailed in the survey practice notes¹ and outlined below. Results are reported to the public transport operators after each survey.

Definition and types of fare evasion

Fare evasion constitutes those who are travelling on public transport without a valid ticket. The fare evasion rate represents the percentage of all trips that are made without a valid ticket, including those taken on a concession ticket without a valid concession entitlement. The fare compliance rate is therefore the percentage of all trips that are made with valid tickets, and where appropriate, valid concessions. The fare compliance rate is equal to 100% minus the fare evasion rate.

Since May 2013, fare compliance on myki has been surveyed; prior to that both Metcard and myki fare compliance were surveyed. Regional train tickets are also included in the survey on regional trains.

The survey captures a range of fare evasion behaviours grouped into the following categories:

- *No ticket* – passengers travelling without a ticket or myki card
- *Runner* – passengers who when intercepted or believe they are about to be intercepted, get off the vehicle to avoid a ticket check
- *Full fare breach* – passengers travelling with an invalid full fare ticket (myki not touched on or with insufficient balance; validated but time expired or defaced/damaged or not validated; regional train ticket not valid for zone or off-peak ticket used at peak time)
- *Concession breach* – passengers travelling with an invalid concession ticket with a valid concession entitlement
- *No entitlement* – passengers travelling with a concession ticket (valid or invalid), without a valid concession entitlement
- *Hoverer / purchaser* – passengers who remain close to a validator or ticket vending machine and validate, touch on or purchase a ticket only when there is a chance of interception; this behaviour is generally confined to trams and buses where validators are on board the vehicle

¹ Metropolitan Fare Evasion survey, May 2016 Practice Note – TRIM reference DOC/16/153590, Regional Train Fare Evasion Survey – May 2016 Practice Note – TRIM reference DOC/16/153636

- *Insufficient balance* - passengers travelling multiple Zones with an insufficient myki money balance. The Victorian Fares and Ticketing Manual 2017 states that passengers are required to have a sufficient balance to cover all travel made.

Fare evasion using myki is also grouped into the following categories:

- *myki with insufficient balance* – where a myki has a zero or negative balance, due to the passenger not topping up the card before travel. A myki with insufficient balance cannot be touched on and therefore no fare is paid.
- *myki not touched on (with balance)* – where a myki card has funds but has not been touched on and therefore the passenger is not paying a fare for travel.
- *Ineffective myki* – where a myki card is defective such that it cannot be read by the Hand Held Device or Fare Payment Device, and therefore no fare is paid.

While any of these behaviours may in fact be accidental or deliberate fare evasion, the survey does not attempt to determine passenger intent and does not distinguish between the two.

Data collection methodology

The fare compliance survey is conducted by teams of Authorised Officers accompanied by survey staff. Survey teams on tram and bus have three surveyors and two Authorised Officers, while teams on trains normally have four Authorised Officers and three surveyors. Authorised Officers are provided by the operator. Digital data capture technology was used in the October 2019 survey, with a surveyor recording the data for each Authorised Officer where possible.

The teams are rostered to survey on specified routes or lines, on weekdays and weekends at set times. Survey methods vary by mode to accommodate differences in operating environments, for example, train passengers must touch on prior to boarding and prior to entering a platform, while tram and bus passengers may defer purchase or touch on until on-board. In general, the survey team boards a train, tram or bus and moves through the vehicle with Authorised Officers checking tickets and survey staff recording passenger counts and the types of tickets and fare evasion encountered. During peak times, surveying of train passengers may take place on platforms rather than on train carriages, due to crowding.

The survey of regional train is broadly similar to that conducted on metropolitan services. The October 2019 survey was conducted by conductors travelling on regional trains, accompanied by survey staff. On boarding a regional train service, the conductor and survey staff move through the entire train with conductors checking all tickets and survey staff recording the data as presented by conductors.

All evasions are recorded regardless of whether or not they would have attracted a 'Report of Non Compliance' in normal operation.

Survey scope

The metropolitan fare compliance survey is conducted on a representative sample of all train lines, tram routes and bus routes within the metropolitan area, with the exception of school bus routes. Surveys are conducted between 7am and 7pm on weekdays and between 10am and 5pm on weekends. There are no surveys on buses on Sundays.

The survey program is designed to run over a four week period in May and October each year. The number of surveys completed depends on multiple factors including frequency of services, passenger

numbers, size of each sample and survey hours per shift. Minimum sample sizes are determined by a formula set down in the survey practice note.

The regional train fare compliance survey encompasses all lines within the 'commuter belt', which is defined as rail lines extending as far out as Bendigo, Ballarat, Geelong, Traralgon and Seymour. The survey covers combinations of inbound and outbound services by am, off-peak and pm time bands, and by day type (weekday, Saturdays and Sundays).

Calculation of fare compliance estimates

Fare compliance estimates are derived from appropriately weighted survey data using statistical estimation procedures.

The weightings ensure that the survey results are representative of the true population, and not just of the sample collected. This corrects for the effects of any disproportionate sampling that may occur as a result of the sampling and scheduling process. This practice has been employed since 2008.

Ticket touch-ons and validations data (after application of validation rates) are used to determine the total number of trips in each survey strata, against which the survey data is weighted. Weights are determined for each location (train line, tram depot, bus areas), day of week (weekday, weekend) and time of day (am peak, off peak, pm peak) combination.

The primary aim of the survey is to measure the modal level fare compliance rates across the metropolitan network and on the regional train commuter belt train services. Although tickets are checked at various locations and times it is not possible to accurately report fare compliance rates for each strata or disaggregation within the survey as there is not always an adequate sample within each strata to report a meaningful result. Fare compliance rates for particular strata, such as location or time of day, are only reported where a meaningful and comparable result can be derived from the survey data as presented by conductors.

Following a review in consultation with the University of Melbourne's Statistical Consulting Centre, the statistical procedures for deriving the fare compliance estimates from the survey data were refined for the May 2010 survey. The new methods produce comparable estimates to previous surveys, but also provide a measure of precision for each estimate, including disaggregated estimates by location, time of day etc. The precision measures, or confidence intervals, indicate the extent to which the fare compliance estimates, particularly the disaggregated estimates, can be reasonably compared.

Details of the estimation procedures are included in technical reports provided by the University of Melbourne's Statistical Consulting Centre².

Please note: Figures are rounded to one decimal place throughout. This may mean that some combined results are impacted.

² Estimation programs for PTV's metropolitan fare compliance survey – TRIM reference DOC/14/139095.

Results

Data collected

In the October 2019 survey, over 37 thousand passengers were surveyed on the metropolitan network and over 19 thousand on V/Line train services. The numbers of passengers and services surveyed on each mode are shown in Table 1.

Table 1: Passengers Surveyed, October 2019 Fare Compliance Survey

| Mode | Metropolitan Train | Tram | Metropolitan Bus | Metropolitan Network | Regional Train |
|-------------------|--------------------|--------|------------------|----------------------|----------------|
| Tickets Checked | 10,533 | 12,320 | 14,194 | 37,047 | 19,244 |
| Services Surveyed | 1,106 | 1,257 | 2,615 | 4,978 | 150 |

Fare compliance rates

Estimated rates of fare compliance for all surveys from 2013 to date are set out in Figure 1 and the results from 2005 are shown in Table 2. Confidence levels for each estimate and disaggregated estimates by location, time of day and day type are set out in Appendix A - Precision and disaggregation of survey results.

Figure 1: Estimated fare compliance rate by mode (May 2013 - October 2019)

Table 2: Estimated fare compliance rate by mode (2005 - 2019) %

| Survey Period | Metropolitan Train | Tram | Bus | Metropolitan Network | Regional Train |
|---------------|--------------------|------|------|----------------------|----------------|
| May 2005 | 86.5 | 80.6 | | | |
| Oct 2005 | 89.3 | 84.7 | 83.9 | 86.6 | |

| May 2014 | 93.7 | 91.2 | 87.3 | 91.3 | 95.1 |
| Oct 2014 | 95.9 | 94.0 | 91.3 | 94.1 | 93.0 |
| May 2015 | 97.3 | 95.2 | 91.3 | 95.0 | 93.9 |
| Oct 2015 | 97.4 | 95.2 | 94.9 | 96.2 | 95.1 |
| May 2016 | 97.7 | 95.3 | 92.7 | 95.9 | 95.7 |
| Oct 2016 | 97.4 | 96.4 | 93.6 | 96.2 | 95.9 |
| May 2017 | 97.6 | 95.1 | 89.2 | 94.8 | 94.2 |
| Oct 2017 | 97.3 | 95.4 | 91.2 | 95.3 | 96.2 |
| May 2018 | 97.0 | 96.1 | 91.0 | 95.3 | 93.6 |
| Oct 2018 | 97.5 | 96.8 | 92.0 | 96.0 | 95.1 |
| May 2019 | 96.9 | 97.1 | 95.1 | 96.5 | 93.9 |
| Oct 2019 | 97.1 | 97.3 | 96.0 | 96.8 | 95.3 |

Fare evasion behaviour

Table 3 and Figure 2 show fare evasion behaviour for the current survey by metropolitan mode and for regional trains. The most common forms of fare evasion in the October 2019 survey were no ticket and full fare breach.

Table 3: Fare evasion behaviour by mode (October 2019 survey) %

| Fare evasion behaviour | Metropolitan train | Tram | Metropolitan bus | Metropolitan network | Regional train |
|------------------------------------|--------------------|------------|------------------|----------------------|----------------|
| No ticket | 1.0 | 1.1 | 2.2 | 1.4 | 1.0 |
| Runner | 0.3 | 0.6 | 0.1 | 0.2 | - |
| Full fare breach | 0.7 | 0.7 | 0.9 | 0.8 | 1.7 |
| Concession breach | 0.3 | 0.1 | 0.4 | 0.3 | 0.4 |
| No entitlement | 0.5 | 0.2 | 0.3 | 0.4 | 0.5 |
| Hoverer/purchaser | 0.0 | 0.1 | 0.0 | 0.0 | - |
| Insufficient balance (V/Line only) | | | | | 1.2 |
| Invalid other (V/Line only) | | | | | 0.0 |
| Total | 2.9 | 2.7 | 4.0 | 3.2 | 4.7 |

Figure 2: Fare evasion behaviour by mode (October 2019 survey) %

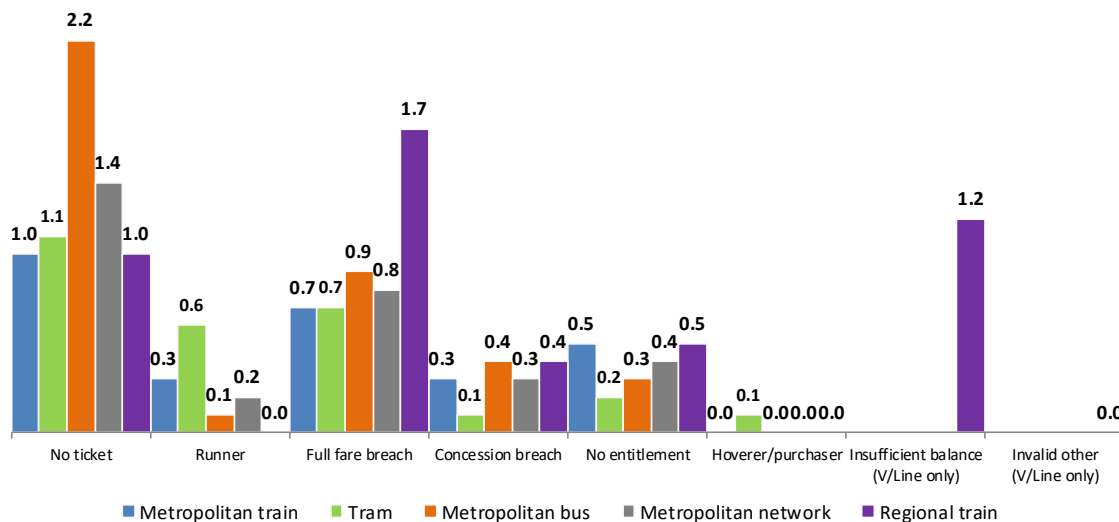

Figure 3 shows the incidence of different types of fare evasion behaviour on the metropolitan network since October 2013.

Figure 3: Fare evasion behaviour, metropolitan network (October 2013 - October 2019)

Table 4 and Figure 4 show myki fare evasion behaviour for the current survey for the metropolitan modes and regional train. The rates shown include both full fare and concession fare myki breaches.

Table 4: myki fare evasion behaviour by mode (October 2019 survey) %

| myki Fare Evasion Behaviour | Metropolitan Train | Tram | Metropolitan Bus | Metropolitan Network | Regional Train |
|------------------------------------|--------------------|------|------------------|----------------------|----------------|
| myki with insufficient balance | 0.6 | 0.4 | 0.8 | 0.7 | 0.7 |
| myki not touched on (with balance) | 0.4 | 0.3 | 0.6 | 0.5 | 1.4 |
| Ineffective myki | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |

Figure 4: myki fare evasion behaviour by mode (October 2019 survey) %

Fare compliance on metropolitan train

Figure 5: Fare evasion behaviour, metropolitan train (October 2013 - October 2019)

Figure 5 shows the incidence of fare evasion behaviour on metropolitan train since October 2013. Metropolitan train fare compliance has seen a small increase in 'full fare breach' fare evasion

behaviour in October 2019, following a period of sustained decline. A small decrease in 'no ticket' behaviour is observed from the May 2019 survey, following an increase from the wave prior.

Figure 6 shows the incidence of myki fare evasion behaviour on metropolitan train from October 2016 to October 2019.

Figure 6: myki fare evasion behaviour, metropolitan train (October 2016 - October 2019)

Fare compliance on metropolitan tram

Figure 7: Fare evasion behaviour, metropolitan tram (October 2013 - October 2019)

Figure 7 shows the incidence of fare evasion behaviour on tram since 2009. In October 2019, tram fare compliance rates were high at 97.3 percent, this is largely due to a continuing decline in the occurrence of ‘runner’ and ‘no ticket’ fare evasion behaviour, each down by 1 percentage point.

Figure 8 shows the incidence of myki fare evasion behaviour on metropolitan tram from October 2016 to October 2019.

Figure 8: myki fare evasion behaviour, metropolitan tram (October 2016 - October 2019)

In the October 2014 fare compliance survey a new measure was added to monitor the difference between the fare compliance rate in the CBD, CBD fringe and non CBD. Table 5 and Figure 9 show the incidence of fare evasion by area on tram. Although estimated higher evasion rates were observed in CBD fringe locations, no significant difference was observed between CBD fringe and non CBD areas in the October 2019 survey.

Table 5: Fare evasion rate by area, tram (October 2019)

| | Estimate | 95% confidence interval |
|------------|--------------------|-------------------------|
| CBD | no longer measured | - |
| CBD fringe | 2.7 | 1.9, 3.5 |
| non CBD | 2.7 | 2.1, 3.3 |

Figure 9: Fare evasion rate by area, tram (October 2016 - October 2019)

Fare compliance on metropolitan bus

Figure 10: Fare evasion behaviour, metropolitan bus (October 2013 - October 2019)

Figure 10 shows the incidence of fare evasion behaviour on metropolitan bus since October 2013. Metropolitan bus fare compliance improved to 96.0 percent in October 2019. Full fare breach evasion saw a slight increase from May 2019, with drops observed across all other evasion behaviours.

Figure 11 shows the incidence of myki fare evasion behaviour on metropolitan bus from May 2017 to October 2019.

Figure 11: myki fare evasion behaviour, metropolitan bus (May 2017 - October 2019)

Fare compliance on regional train

Fare compliance surveys on regional train were introduced as part of the October 2012 survey.

Regional Train compliance rates continue to fluctuate, with results from the current October 2019 survey of 95.3 percent on par with results from October 2018 of 95.1 percent, compared to 93.9 percent in May 2019.

Figure 12 shows the incidence of fare evasion behaviour on regional train from October 2012 to October 2019. A decrease in the frequency of full fare breach evasions are observed from May 2019 results.

Figure 12: Fare evasion behaviour, regional train (October 2013 - October 2019)

Figure 13 shows the incidence of myki fare evasion on regional train from May 2015 to October 2019.

Figure 13: myki fare evasion behaviour, regional train (October 2016 - October 2019)

Annual fare compliance rates

Annual rates for fare compliance are provided for the 2019 calendar year by combining results of the two relevant surveys. Figure 14 and Table 6 show the estimated annual fare compliance rate for calendar years from 2009 to 2019 and 2005 to 2019 respectively.

Figure 14: Estimated calendar year fare compliance rate by mode (2009 to 2019)

Table 6: – Estimated calendar year fare compliance rate by mode (2005 to 2019)

| | Metropolitan train | Tram | Metropolitan bus | Metropolitan network | Regional Train |
|------|--------------------|-------|------------------|----------------------|----------------|
| 2005 | 88.0% | 82.7% | | | |
| 2006 | 89.9% | 87.9% | 91.0% | 89.4% | |
| 2007 | | 90.7% | 92.4% | | |
| 2008 | 93.1% | 89.1% | 92.9% | 91.6% | |
| 2009 | 91.7% | 86.6% | 94.2% | 90.4% | |
| 2010 | 89.8% | 82.4% | 93.0% | 87.8% | |
| 2011 | 90.8% | 80.7% | 91.6% | 87.3% | |
| 2012 | 89.8% | 88.1% | 91.3% | 89.5% | |
| 2013 | 90.9% | 90.0% | 86.5% | 89.6% | 95.1% |
| 2014 | 94.8% | 92.6% | 89.2% | 92.7% | 94.0% |
| 2015 | 97.3% | 95.2% | 93.0% | 95.6% | 94.6% |
| 2016 | 97.6% | 95.9% | 93.1% | 96.0% | 95.8% |
| 2017 | 97.5% | 95.3% | 90.2% | 95.0% | 95.2% |
| 2018 | 97.3% | 96.5% | 91.5% | 95.7% | 94.4% |
| 2019 | 97.0% | 97.2% | 95.6% | 96.6% | 94.6% |

Revenue impact of fare evasion

The revenue impact of fare evasion is an estimate of the value of fare revenue lost through fare evasion. Appendix B - Revenue impact calculation sets out the calculations applied to estimate the revenue impact.

The results of the October 2019 and May 2019 fare compliance surveys are used to estimate the annual revenue impact of fare evasion. For the calendar year 2019³, the revenue impact is estimated at \$25.2 million on the metropolitan network and \$5.4 million for regional trains; a total impact of \$30.7 million. This is made up of \$16.5 million for the period of January to June 2019 and \$14.2 million in July to December 2019. The increased fare compliance rates have seen a decrease in the revenue impact by \$2.3 million in the last six months.

Table 7 shows the estimated revenue lost to fare evasion for the 2019 calendar year based on the October 2019 and May 2019 surveys. The estimated cost impact is exclusive of GST.

Table 7 - Estimated fare compliance rates (October 2019) %

| | Metropolitan Train | Tram | Metropolitan Bus | Metropolitan Network | Regional Train | Total |
|-----------------|--------------------|------|------------------|----------------------|----------------|-------|
| Jan - Jun 2019 | 4.9 | 4.0 | 4.2 | 13.1 | 3.4 | 16.5 |
| July - Dec 2019 | 4.6 | 4.0 | 3.6 | 12.1 | 2.1 | 14.2 |
| 2019 | 9.5 | 8.0 | 7.8 | 25.2 | 5.4 | 30.7 |

³ Revenue figures for the months of October, November and December 2019 are not currently available, projected revenue figures have been used for this month

Appendix A - Precision and disaggregation of survey results

Confidence levels for survey estimates

The fare compliance survey is a sample survey, which means that a sample of public transport trips are surveyed in order to deduce the fare compliance rate across all trips on the public transport network. For this reason, the fare compliance rates produced by the survey are estimates and not exact measures of fare compliance.

Since 2010 the fare compliance survey and estimation procedures have enabled the calculation of a precision measure, in the form of a 95 per cent confidence interval, for each estimate. The 95 per cent confidence interval is interpreted as the range of values in which we are 95 per cent certain that the true measure occurs. For example, where a fare compliance estimate has a 95 per cent confidence interval of 96.9 to 98.5, we are 95 per cent certain that the true rate of fare compliance is within this range.

The confidence intervals provide an indication of the precision of each estimate, including the disaggregated estimates by location, day type and time of day. This measure of precision is used to indicate the validity of any comparison between estimates. For example, where the confidence intervals of two estimates overlap, it cannot be said with high confidence that either estimate is higher or lower than the other.

Fare compliance estimates by mode

Table 8 shows the estimated fare compliance rates and 95 per cent confidence intervals for each mode surveyed in the October 2019 survey. Estimates of the fare compliance rates exclusive of no entitlement fare evasion are also included, as these are used in the revenue impact calculations.

Table 8: Estimated fare compliance rates (October 2019) %

| Fare compliance estimate | Metropolitan Train | Tram | Metropolitan Bus | Regional Train |
|---|--------------------|------------|------------------|----------------|
| Fare evasion rate | 97.1 | 97.3 | 96.0 | 95.3 |
| 95% confidence interval | 96, 98.2 | 96.8, 97.8 | 95.6, 96.4 | 94.5, 96.1 |
| Fare evasion rate, excl. no entitlement | 97.7 | 97.5 | 96.3 | 95.7 |
| 95% confidence interval | 96.8, 98.6 | 97, 98 | 95.9, 96.7 | 94.9, 96.5 |

Estimated rates of fare evasion behaviour

Table 9 shows the estimates and 95 per cent confidence intervals (95% CI) for rates of each type of fare evasion behaviour per mode.

Table 9: Estimates of types of fare evasion per mode (October 2019) %

| Types of fare evasion behaviour | Train | Train 95% CI | Tram | Tram 95% CI | Metropolitan Bus | Bus 95% CI | Regional Train | Regional Train 95% CI |
|---------------------------------|------------|-----------------|------------|-----------------|------------------|-----------------|----------------|-----------------------|
| No ticket | 1.0 | 0.6, 1.4 | 1.1 | 0.8, 1.4 | 2.2 | 1.9, 2.5 | 1.0 | 0.7, 1.3 |
| Runner | 0.3 | 0.1, 0.5 | 0.6 | 0.3, 0.9 | 0.1 | 0.0, 0.2 | | |
| Full fare breach | 0.7 | 0.4, 1.0 | 0.7 | 0.5, 0.9 | 0.9 | 0.7, 1.1 | 1.7 | 1.3, 2.1 |
| Concession fare breach | 0.3 | 0.0, 0.7 | 0.1 | 0.0, 0.2 | 0.4 | 0.3, 0.5 | 0.4 | 0.2, 0.6 |
| No entitlement | 0.5 | 0.2, 0.8 | 0.2 | 0.1, 0.3 | 0.3 | 0.2, 0.4 | 0.5 | 0.2, 0.8 |
| Hoverer/Purchaser | | | 0.1 | 0.0, 0.2 | 0.0 | 0.0, 0.0 | | |
| Insufficient balance | | | | | | | 1.2 | 0.8, 1.6 |
| Invalid other | | | | | | | 0.0 | 0.0, 0.0 |
| Total | 2.9 | 1.8, 4.0 | 2.7 | 2.2, 3.2 | 4.0 | 3.6, 4.4 | 4.7 | 3.9, 5.5 |

Table 10 shows the estimates and 95 per cent confidence intervals (95% CI) for rates of each type of myki fare evasion behaviour per mode.

Table 10: Estimates of types of myki fare evasion per mode (October 2019) %

| myki fare evasion behaviour | Train | Train 95% CI | Tram | Tram 95% CI | Metropolitan Bus | Bus 95% CI | Regional Train | Regional Train 95% CI |
|------------------------------------|-------|--------------|------|-------------|------------------|------------|----------------|-----------------------|
| myki with insufficient balance | 0.6 | 0.2, 1.0 | 0.4 | 0.2, 0.6 | 0.8 | 0.6, 1.0 | 0.7 | 0.5, 0.9 |
| myki not touched on (with balance) | 0.4 | 0.2, 0.6 | 0.3 | 0.2, 0.4 | 0.6 | 0.5, 0.7 | 1.4 | 1.0, 1.8 |
| Ineffective myki | 0.0 | 0.0, 0.0 | 0.0 | 0.0, 0.0 | 0.0 | 0.0, 0.0 | 0.0 | 0.0, 0.0 |

Fare evasion estimates by ticket type

As of 29th December 2012, myki is the sole ticket system operational on the metropolitan network and Metcard fare compliance is no longer included in the fare compliance survey. The roll out of myki onto regional train commuter belt trains was completed in March 2014, however regional train tickets can still be used for journeys that continue beyond the commuter belt. Since May 2013 the improper use of myki and regional train tickets has been separately identified in the regional train fare compliance survey.

Table 11 reports three types of breach (full fare breach, concession fare breach and no entitlement) for myki and regional train tickets

Table 11: Estimates for myki and regional train ticket fare evasion on regional train (October 2019)

| Fare evasion behaviour | Regional ticket | Regional ticket 95% CI | myki | myki 95% CI |
|------------------------|-----------------|------------------------|------|-------------|
| Full fare breach | 0.0 | 0.0, 0.0 | 1.7 | 1.3, 2.1 |
| Concession fare breach | 0.0 | 0.0, 0.0 | 0.4 | 0.2, 0.6 |
| No entitlement | 0.1 | 0.0, 0.2 | 0.4 | 0.2, 0.6 |

Table 12 shows the rates of myki and other ticket type usage.

Table 7: Estimates for myki and other ticket type usage on regional train (October 2019)

| myki behaviour | Estimate (%) | 95% CI |
|--|--------------|-------------------|
| Valid myki | 87.9 | 83.9, 91.9 |
| Invalid myki | 3.6 | 2.9, 4.3 |
| Total myki | 91.5 | 87.4, 95.6 |
| Valid regional ticket | 3.7 | 3.1, 4.3 |
| Invalid regional ticket | 0.0 | 0.0, 0.0 |
| Total regional ticket | 3.8 | 3.2, 4.4 |
| Valid other ticket (inc. free entitlement) | 3.6 | 2.7, 4.5 |
| No ticket | 1.0 | 0.7, 1.3 |

Fare evasion estimates for metropolitan train

Table 13 shows the estimates of fare evasion rates and 95 per cent confidence intervals on metropolitan train by day type, time of day, and train line.

Table 13: Fare evasion estimates by strata, metropolitan train (October 2019)

| Train Strata | Fare evasion estimate (%) | 95% confidence interval |
|-----------------------------|---------------------------|-------------------------|
| Overall | 2.9 | 1.8, 4.0 |
| Day Type | | |
| Weekday | 2.8 | 1.5, 4.1 |
| Weekend | 3.0 | 1.5, 4.5 |
| Time of Day | | |
| Monday to Friday, am peak | 3.0 | 0.7, 5.3 |
| Monday to Friday , off peak | 2.2 | 1.0, 3.4 |
| Monday to Friday , pm peak | 2.9 | 0.8, 5.0 |
| Line Group | | |
| Alamein/Glen Waverley | 2.6 | 0.2, 5.0 |
| Dandenong/Pakenham | 2.6 | 0.0, 6.0 |
| Frankston | 2.4 | 0.6, 4.2 |
| Lilydale/Belgrave | 3.0 | 0.0, 6.1 |
| Sandringham | 2.9 | 0.5, 5.3 |
| South Morang/Hurstbridge | 4.7 | 0.0, 9.4 |
| Sunbury | 1.9 | 0.0, 3.9 |
| Upfield/Craigieburn | 1.8 | 0.0, 3.7 |
| Werribee/Williamstown | 3.2 | 0.2, 6.2 |

Fare evasion estimates for tram

Table 14 shows the estimates of fare evasion rates and 95 per cent confidence intervals on tram by day type, time of day, and the tram depot from which the surveyed route originates.

Table 84: Fare evasion estimates by strata - tram

| Tram Strata | Fare evasion estimate (%) | 95% confidence interval |
|----------------------------|---------------------------|-------------------------|
| Overall | 2.7 | 2.2, 3.2 |
| Day Type | | |
| Weekday | 3.0 | 2.4, 3.6 |
| Weekend | 1.6 | 1.0, 2.2 |
| Time of Day | | |
| Monday to Friday, am peak | 3.0 | 1.6, 4.4 |
| Monday to Friday, off peak | 3.2 | 2.3, 4.1 |
| Monday to Friday, pm peak | 2.7 | 1.8, 3.6 |
| Depot | | |
| Brunswick | 3.3 | 1.6, 5.0 |
| Camberwell | 1.9 | 0.6, 3.2 |
| Essendon | 2.0 | 0.6, 3.4 |
| Glenhuntly | 3.4 | 2.0, 4.8 |
| Kew | 2.8 | 1.3, 4.3 |
| Malvern | 2.2 | 0.9, 3.5 |
| Preston | 3.1 | 1.5, 4.7 |
| Southbank | 2.8 | 1.6, 4.0 |
| Area | | |
| | Estimate | 95% confidence interval |
| CBD | No longer measured | 0.0 |
| CBD Fringe | 2.7 | 1.9, 3.5 |
| Non CBD | 2.7 | 2.1, 3.3 |

Fare evasion estimates for metropolitan bus

Table 15 shows the estimates of fare evasion rates and 95 per cent confidence intervals on metropolitan bus by day type and location.

Table 95: Fare evasion estimates by strata - metropolitan bus (October 2019)

| Bus Strata | Fare evasion estimate (%) | 95% confidence interval |
|---------------------------|---------------------------|-------------------------|
| Overall | 4.0 | 3.6, 4.4 |
| Day Type | | |
| Weekday | 4.0 | 3.5, 4.5 |
| Saturday | 3.4 | 2.6, 4.2 |
| Location | | |
| Altona Gate SC | 7.2 | 4.6, 9.8 |
| Box Hill RS | 1.5 | 0.4, 2.6 |
| Broadmeadows RS | 4.2 | 2.2, 6.2 |
| Chadstone SC | 2.3 | 0.7, 3.9 |
| Dandenong RS | 2.2 | 1.1, 3.3 |
| Doncaster SC | 4.2 | 1.5, 6.9 |
| Epping Plaza SC | 6.8 | 4.1, 9.5 |
| Footscray RS | 3.3 | 1.5, 5.1 |
| Fountain Gate SC | 2.7 | 0.5, 4.9 |
| Frankston RS | 1.3 | 0.0, 2.7 |
| Glen Waverley RS | 1.1 | 0.1, 2.1 |
| Greensborough SC | 7.0 | 4.3, 9.7 |
| Highpoint SC | 2.9 | 1.2, 4.6 |
| Knox City SC | 7.9 | 4.6, 11.2 |
| Lilydale RS | 3.0 | 0.0, 7.3 |
| Lonsdale St CBD | 5.1 | 2.0, 8.2 |
| Melton RS | 3.6 | 0.5, 6.7 |
| Monash University Clayton | 3.1 | 0.9, 5.3 |
| Moonee Ponds IC | 4.0 | 1.8, 6.2 |
| Northland SC | 4.2 | 2.1, 6.3 |
| Oakleigh RS | 3.9 | 1.2, 6.6 |
| Reservoir RS | 3.4 | 1.4, 5.4 |
| Ringwood RS | 3.0 | 1.3, 4.7 |
| Southland SC | 3.4 | 0.0, 7.3 |
| South Morang RS | 8.8 | 5.6, 12.0 |
| St Albans RS | 6.6 | 2.8, 10.4 |
| Sunshine RS | 9.4 | 6.7, 12.1 |
| Werribee Plaza SC | 5.2 | 0.1, 10.3 |

Fare evasion estimates for regional train

Table 16 shows the estimates of fare evasion rates and 95 per cent confidence intervals on regional train by time of day, day type, direction and line.

Table 106: Fare evasion estimates by strata, regional train (October 2019)

| Regional train strata | Fare evasion estimate (%) | 95% confidence intervals |
|-------------------------------|---------------------------|--------------------------|
| Overall | 4.7 | 3.9, 5.5 |
| Time of day / day type | | |
| Peak | 1.8 | 1.2, 2.4 |
| Off peak | 8.0 | 6.3, 9.7 |
| Monday to Friday | 4.8 | 3.9, 5.7 |
| Saturday | 3.9 | 2.7, 5.1 |
| Sunday | 3.1 | 1.9, 4.3 |
| Direction | | |
| To City (up) | 5.7 | 4.4, 7.0 |
| From City (down) | 3.7 | 2.8, 4.6 |
| Line | | |
| Eastern | 8.7 | 6.4, 11.0 |
| North Eastern | 8.8 | 5.1, 12.5 |
| Northern | 2.4 | 1.4, 3.4 |
| Western | 4.0 | 2.2, 5.8 |
| South Western | 4.5 | 3.3, 5.7 |

Appendix B - Revenue impact calculation

The level of fare compliance has an impact on fare revenue. The method used to estimate revenue lost uses the following inputs:

1. F_{mode} Fare evasion rate exclusive of 'No entitlement' – disaggregated by mode
2. C_{mode} 'No entitlement' – disaggregated by mode
3. T_{mode} Modal patronage as per cent of total patronage, for the period
4. $R_{network}$ Revenue for half year (this is network-wide, not available disaggregated by mode)
5. N Nominal concession ticket discount.

Step 1: Revenue impact percent (I_{mode})⁴

For each mode, $I_{mode} = (1 - N) \times C_{mode} + F_{mode}$ (1)

Step 2: Imputed half-year revenue by mode

With an integrated fare system there is no obvious way of disaggregating revenue generation by mode. The working definition, (employed here), is that revenue by mode is proportional to patronage by mode.

So for each mode, $R_{mode} = T_{mode} \times R_{network}$ (2)

Step 3: Estimated revenue impact in dollars (\$)

For each mode, $S_{mode} = I_{mode} \times R_{mode} \div (1 - I_{mode})$ (3)

⁴ This is equivalent to the previously agreed formulation of $I_{mode} = (1 - N) \times P_{mode} \times (1 - V_{mode}) + F_{mode}$, where P is the percentage of trips made by concession users and V is the valid concession percentage

Table 17 shows each of the inputs for each mode and the subsequent estimates of the impact on revenue.

Table 11: Calculation of the revenue impact of fare evasion (July – December 2019)

| Category | Ref | Metropolitan train | Tram | Metropolitan bus | Metropolitan Network | V/Line train |
|--|---------|--------------------|-------|------------------|----------------------|--------------|
| Fare Evasion (excl. 'No entitlement') | F | 2.3% | 2.5% | 3.7% | | 4.3% |
| No entitlement | C | 0.5% | 0.2% | 0.3% | | 0.5% |
| Proportion of metropolitan patronage (%) | T | 42.3% | 36.1% | 21.5% | | |
| Revenue* for half year (\$m) | R | | | | 412.9 | 44.5 |
| Assume conc. discount on average is | N | 50.0% | 50.0% | 50.0% | | 50.0% |
| Revenue impact (%) | Eqn 1** | 2.6% | 2.6% | 3.9% | | 4.5% |
| Revenue* for the half year By Mode (\$m) | Eqn 2** | 174.8 | 149.2 | 88.8 | | |
| Revenue* impact by mode (\$m) | Eqn 3** | 4.6 | 4.0 | 3.6 | 12.1 | 2.1 |
